BUILDING

View of the "MACO" Template after taking the profile of a cornice.

Use of the Profile "Perfector" for very precise work.

A Few Moments Suffice to take a profile with every detail from an architectural work to a moulding of the most complicated form which, without the "MACO," calls for many hours of careful and tedious work to reproduce. The old systems of constructing a mould are become useless when you have a "MACO" Template. It is indispensable in every draughtsman's office, pattern makers, modelers, and in any other sort of industry.

MANUFACTURERS

Whether you work Iron, Steel, Wood or composition a "MACO" Template will render you service for every job.

DESCRIPTION: Solid made with best quality material the "MACO" is composed of very thin rustless steel laminations which slide one against the other which enables the obtaining of a profile with precision. The laminations are maintained in position between two strips of rubber tailing fitted into two grooves which are held together by two adjustable locking nuts under which are two springs permitting the variation of the tension. The profile obtained remains precisely inverted on one side and projected on the other.
